

# INTERCONTINENTAL TERMINALS COMPANY - TANK FIRE

Preliminary Data Summary

Deer Park, TX

March 19, 2019

Project #111356

#### 1.0 Introduction

On March 17, 2019 Intercontinental Terminals Company (ITC) requested that CTEH® conduct air monitoring in the surrounding community after a tank fire at the Deer Park, TX terminal. CTEH® arrived on-site on March 17, 2019 and began air monitoring and air sampling operations. This report summarizes air monitoring data collected from March 17, 2019 17:02 CDT to March 19, 2019 17:30 CDT.

#### 2.0 Air Monitoring and Sampling Methods

CTEH® developed and implemented an Air Sampling and Analysis Plan (SAP) to document and quantify the release of fugitive emissions, if any, from the fire at ground level. All instrumentation was calibrated at least once per day or per manufacturer's recommendations. Target analytes were measured as listed in **Table 1**, below. Hand-held air monitoring consisted of roaming air monitoring in the surrounding community. All hand-held air monitoring was conducted in the breathing zone.

CTEH® has also collected analytical air samples for a suite of volatile organic compounds (VOCs) at 4 locations in the surrounding area. These samples will be sent to a 3<sup>rd</sup>-party laboratory for rush chemical analysis. A map of these analytical air sampling locations is provided in **Attachment A.** 

#### 3.0 Air Monitoring Results

Attachment A depicts the site location and hand-held monitoring locations for this reporting period.

**Table 1** summarizes the results for community hand-held air monitoring readings.

**Table 1: Community Hand-Held Real-Time Air Monitoring Results** 

		No.	No.	_ 1	Action Level	Basis for
Analyte	Instrument	Readings	Detections	Range <sup>1</sup>	Value*	Action Level
Benzene -	Gastec #121L					¼ EPA 8hr

<sup>&</sup>lt;sup>1</sup>Maximum detections preceded by the "<" symbol are considered non-detections below the limit of detection (LoD) value to the right.

No detections during this reporting period exceeded the action levels as outline in the CTEH $^{\circ}$  SAP. Note that some action levels (i.e., PM<sub>2.5</sub>) may have a time-component associated with them (i.e., over 1 hr. or 8 hrs.). Total VOCs and PM<sub>2.5</sub> have been below levels that would represent a public health concern.

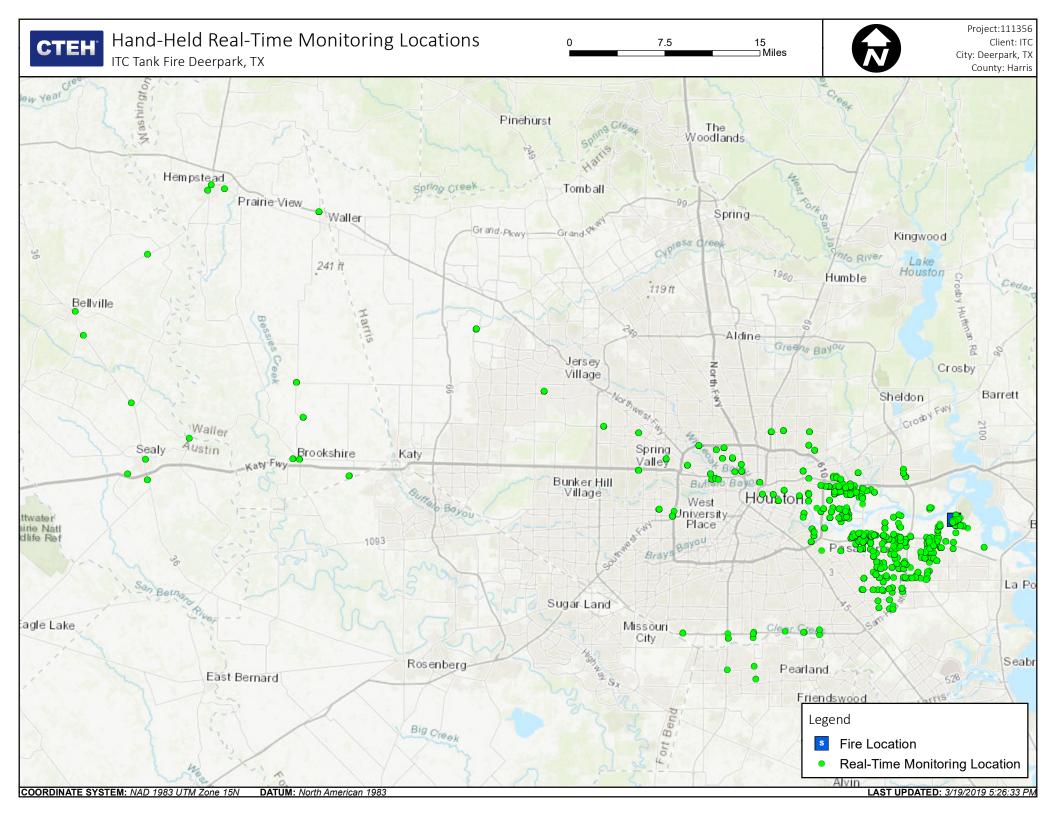

#### 4.0 Weather Conditions

**Attachment B** contains a wind rose depicting wind speed and direction for this reporting period. Data was acquired from the Texas Commission on Environmental Quality (TCEQ) Lynchburg Ferry meteorological station located on Tidal Road approximately 2 mi NNE of the fire.
